

William Wun

Software Engineer — Java, Microservices & Cloud-Oriented Architecture | MBA

(+1) 778-858-3949 | williamwun@gmail.com | Vancouver, BC | linkedin.com/in/williamwunrafael

PROFESSIONAL SUMMARY

Software Engineer with **7+ years** of backend engineering experience in mission-critical, regulated financial systems (Scotiabank LATAM), specializing in Java, Spring Boot, and distributed system design. Delivered production backend services supporting loan approval workflows across multiple LATAM markets, owned 25+ ETL pipelines at regional scale, and led integration recovery efforts preventing direct customer impact. Recently designed and implemented a production-style microservices architecture applying resilience patterns, JWT/OAuth2 security, Redis caching, and cloud-ready containerization aligned with AWS architectural principles.

HIGHLIGHTS

- 7 years engineering secure backend services in regulated banking (Scotiabank LATAM).
- Restored critical loan-approval integration with external credit-risk engine, preventing customer-facing disruption across Costa Rica and Panama.
- Owned 25+ mission-critical ETL pipelines across 7 LATAM markets supporting 500+ agents.
- Designed production-style microservices architecture (Java 17, Spring Boot, Docker) with resilience patterns (Circuit Breaker, Retry with Backoff, Idempotency)
- Implemented JWT & OAuth2 authentication with defense-in-depth validation.
- Cloud-oriented backend design aligned with AWS architectural principles.

SELECTED ARCHITECTURE PROJECT

Acme Shop — Production-Style Microservices Backend (Java 17 | Spring Boot | Docker | AWS-ready)

Designed and implemented a distributed microservices architecture simulating real-world e-commerce systems:

- API Gateway (Spring Cloud Gateway): centralized routing, JWT validation, resilience.
- Auth Service with JWT + OAuth2/OpenID Connect (Google integration) and service-to-service token propagation via Feign.
- Resilience4J Circuit Breaker + Retry with backoff; Idempotency via request hashing & DB constraints.
- Database-per-service pattern (PostgreSQL); Redis caching for read optimization.
- Docker Compose orchestration; CI/CD via GitHub Actions; Observability with Actuator & Micrometer

WORK EXPERIENCE

Independent Technical Development · 2023–2025

Designed and built Acme Shop, a production-style microservices backend (Java 17, Spring Boot, Docker, AWS), while completing MBA at UCW Vancouver. Architecture details in Selected Project section.

Regional IT Analyst (Backend Engineering – Java, Spring Boot, ETL & Integrations)

Scotiabank - LATAM • Lima, Peru | 2017 – 2023

IAP - Lending Core & Digital Onboarding (Java & Spring Boot Backend) (2020–2023)

- Developed and enhanced Spring Boot Restful backend services supporting **loan & leasing approval flows** improving accuracy of credit decisions for Costa Rica and Panama.
- Diagnosed and restored a broken integration between IAP and external credit-risk engines over a multi-week incident, coordinating with infrastructure and business teams to prevent loan approval disruption and customer impact.
- Optimized DB2 transaction logic and SQL data rules to ensure consistency and approval readiness.
- Built and integrated Spring Boot Rest and SOAP based services with **AS400 & IBM DataPower**, strengthening multi-system orchestration.
- Collaborated with Business Analysts and Infra teams ensuring SLA-driven production recovery.

CAT - Campaigns & BI (2017–2020)

- Owned and improved **25+ mission-critical ETL** and SQL-based data processing pipelines (SQL Server, SSIS) powering executive KPI dashboards across 7 LATAM markets supporting 500+ agents.
- Improved pipeline reliability by introducing schema-drift detection and data-quality validation, reducing recurring failures in a high-visibility reporting environment
- Managed **secure production deployments** and post-release validation cycles in enterprise environments involving 100+ international stakeholders.
- Enforced secure execution workflows and governance controls across ETL processing environments using IBM WebSphere and WinSCP.
- Delivered Java/Thymeleaf enhancements boosting campaign performance visibility.
- Designed and implemented a Java Spring Boot + Bootstrap module for campaign management enhancements (6-month project).

TECH SKILLS

- **Backend** | Java 11/17 · Spring Boot · Restful APIs · SOAP Web Service · SQL · Data Validation
- **Security:** JWT · OAuth2 · Role-based access · Defense-in-depth
- **Resilience:** Circuit Breaker · Retry · Idempotency · Backoff strategies
- **Cloud & DevOps:** AWS (EC2, IAM, S3) · Docker · GitHub Actions · Terraform (basic)
- **Data:** PostgreSQL · SQL Server · IBM DB2 · SSIS
- **Observability:** Spring Actuator · Micrometer
- **Tools:** Jira · Bitbucket · ServiceNow · WebSphere

EDUCATION & CERTIFICATIONS

Master of business administration (MBA) University Canada West (UCW) • Vancouver, BC • **2023 - 2025**

Bachelor of Software Engineering UPC • Lima, Peru

Certifications: SMC - Scrum Master Certified (2019) • ITIL (2019)

Languages: English - Professional Working Proficiency (CELPPI 8 / CLB 9) • Spanish — Native
